

Review YouTube Videos for Audio Description

Instructors must **review YouTube videos used in D2L courses** for Audio Description (AD) accessibility. Follow the steps below to get started:

1

Evaluate YouTube Videos

Evaluate Videos using the [Evaluate Existing Videos Checklist](#) to determine if essential visual information is communicated through narration or an added Audio Description track.

2

Determine if Videos Meet AD Requirements

- **Video Meets Audio Description Requirements:** If essential visual information is communicated through narration or audio descriptions, [Add YouTube Video to Kaltura My Media](#) and [Mark Video as Reviewed for Audio Descriptions](#).

Note: Marking an accessible YouTube video as reviewed ensures accuracy with compliance reporting.

- **Video Does Not Meet Audio Description Requirements:** If essential visual information is not communicated through the audio, replace the video with an accessible alternative.

3

Update Videos in D2L Course

For videos that meet AD requirements, remove the existing YouTube video link from D2L Content and replace it with the version added through **Kaltura My Media** via [Existing Activities](#), or [Insert Media](#).
